Pudding!

Your desktop dog companion that helps you stay focused!

You may be asking:

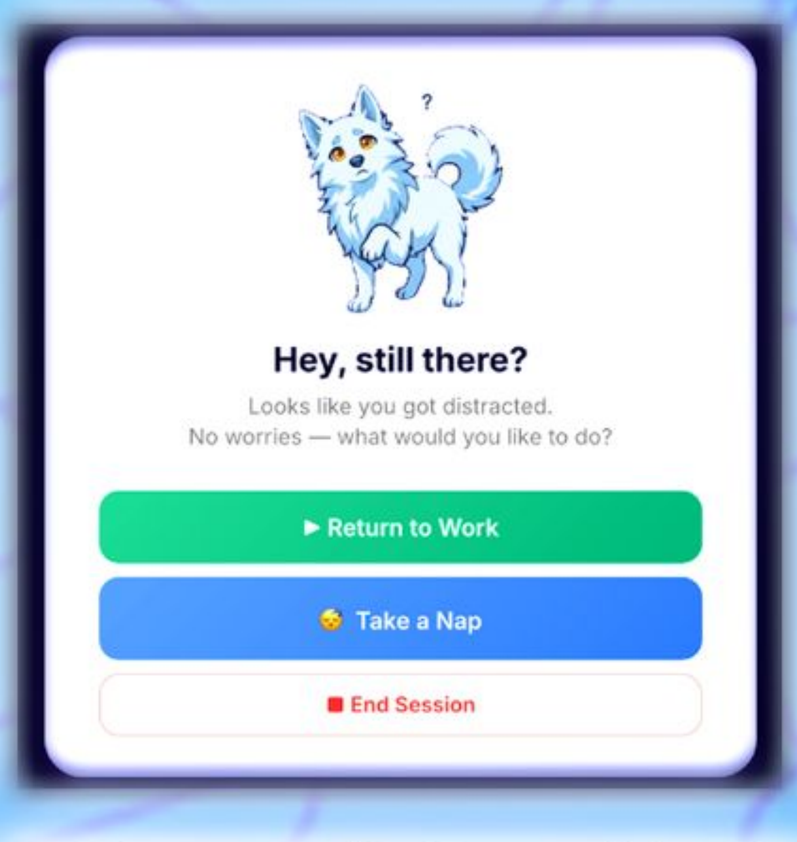
What problem does Pudding solve?

With traditional options, progress often feels invisible while external validation is missing, on top of a high startup friction that causes a *loss in productivity ... yet a gain in* **avoidance** *and* **guilt**.

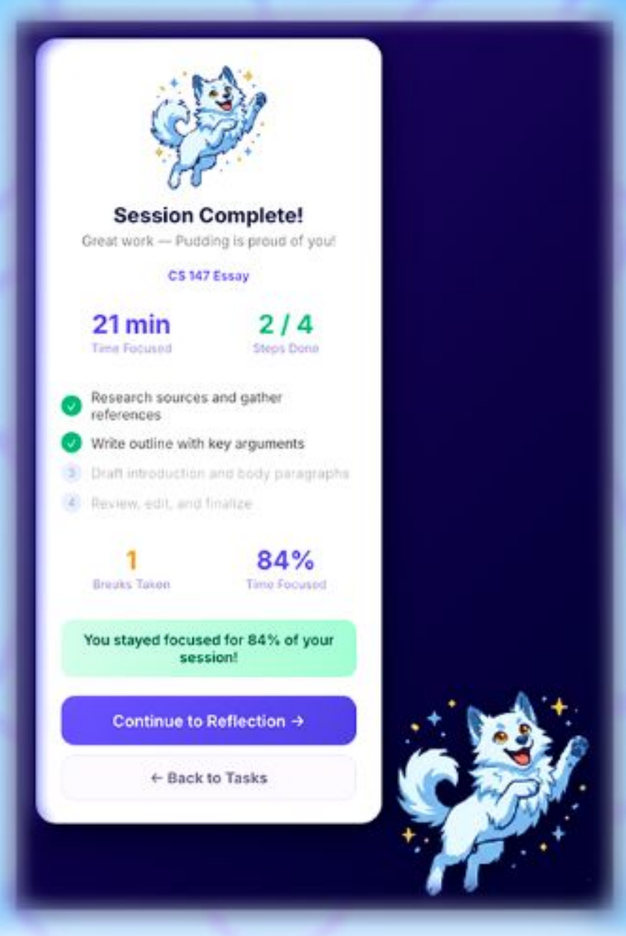
Now how does Pudding solve said problem?

The solution:

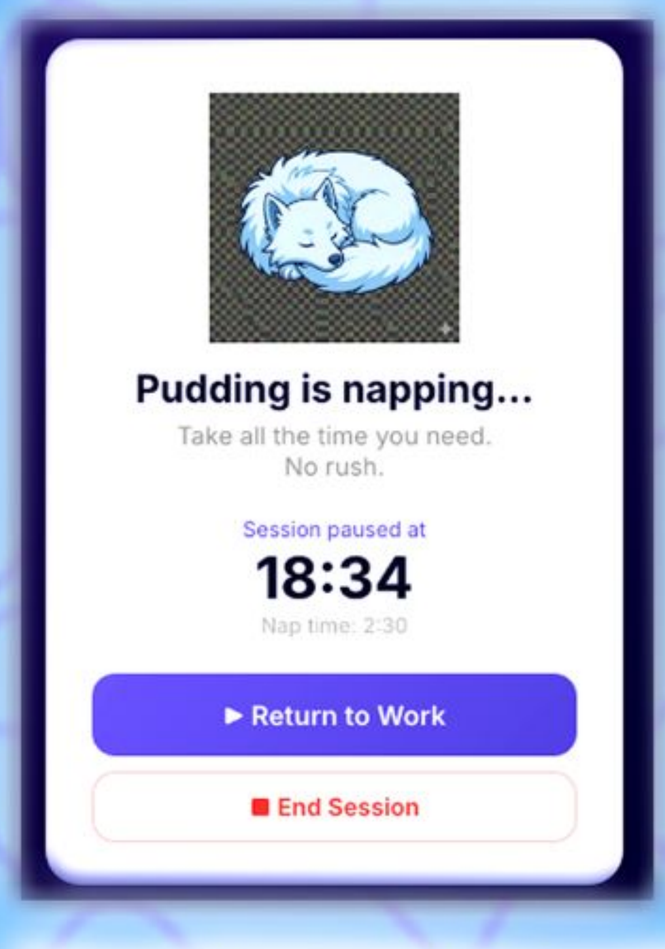
Pudding offers you an ambient desktop presence, like a friend by your side, who offers **emotional support** and **gentle re-entry rituals back** into your work sessions - *none of those pushy notifications or rigid 'streaks' to keep!*



Distracted? No problem! Pudding's got your back!



Pudding will cheer you on before, during, and after a session!



Need a break? Set Pudding to nap mode and return to work anytime!
