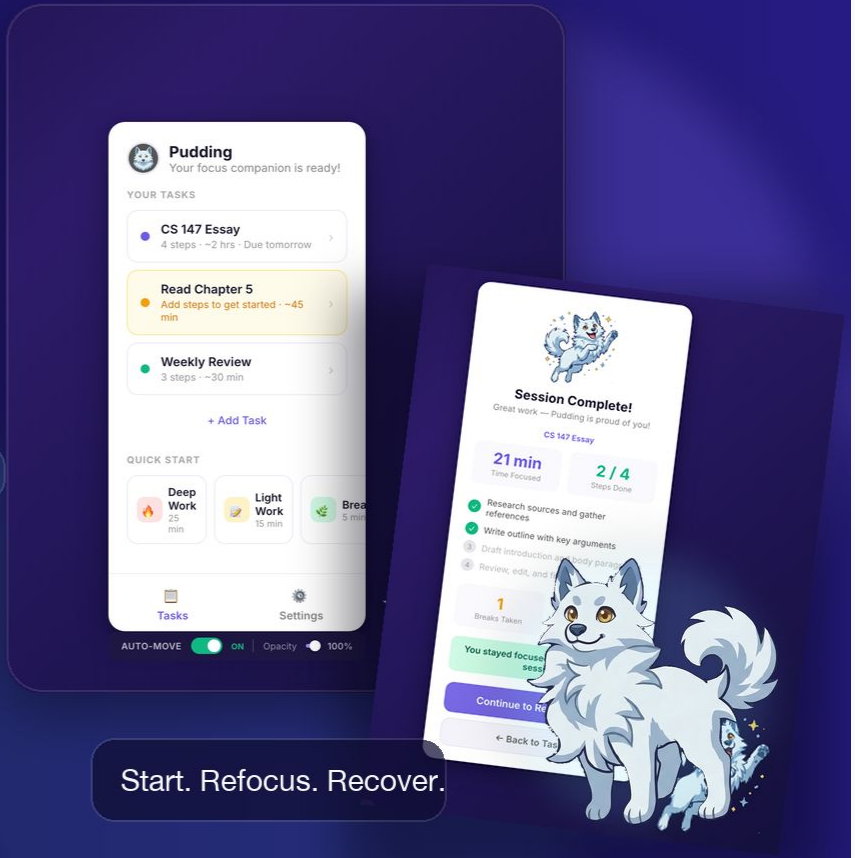
Pudding

A guilt-free desktop companion for focus.

When rigid productivity tools make starting feel overwhelming, Pudding breaks work into small steps and gently helps users start, refocus, and recover without pressure.

Task-first workflow | Gentle check-ins | Low-pressure recovery



Start. Refocus. Recover.

WHEN YOU'RE STUDYING AND
SUDDENLY YOU GO LIKE

Pudding!

*Your desktop dog companion that helps **you** stay focused!*

You may be asking:

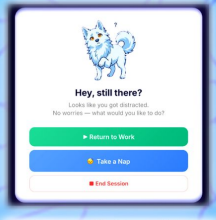
What problem does Pudding solve?

With traditional options, progress often feels invisible while external validation is missing, on top of a high startup friction that causes a *loss in productivity ... yet a gain in* ***avoidance*** *and* ***guilt***.

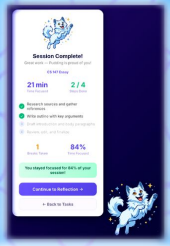
Now how does Pudding solve said problem?

The solution:

Pudding offers you an ambient desktop presence, like a friend by your side, who offers **emotional support** and **gentle re-entry rituals back** into your work sessions - *none of those pushy notifications or rigid 'streaks' to keep!*



Distracted? No problem! Pudding's got your back!



Pudding will cheer you on before, during, and after a session!

Need a break? Set Pudding to nap mode and return to work anytime!
